

30th August Lambda and bootstrapping

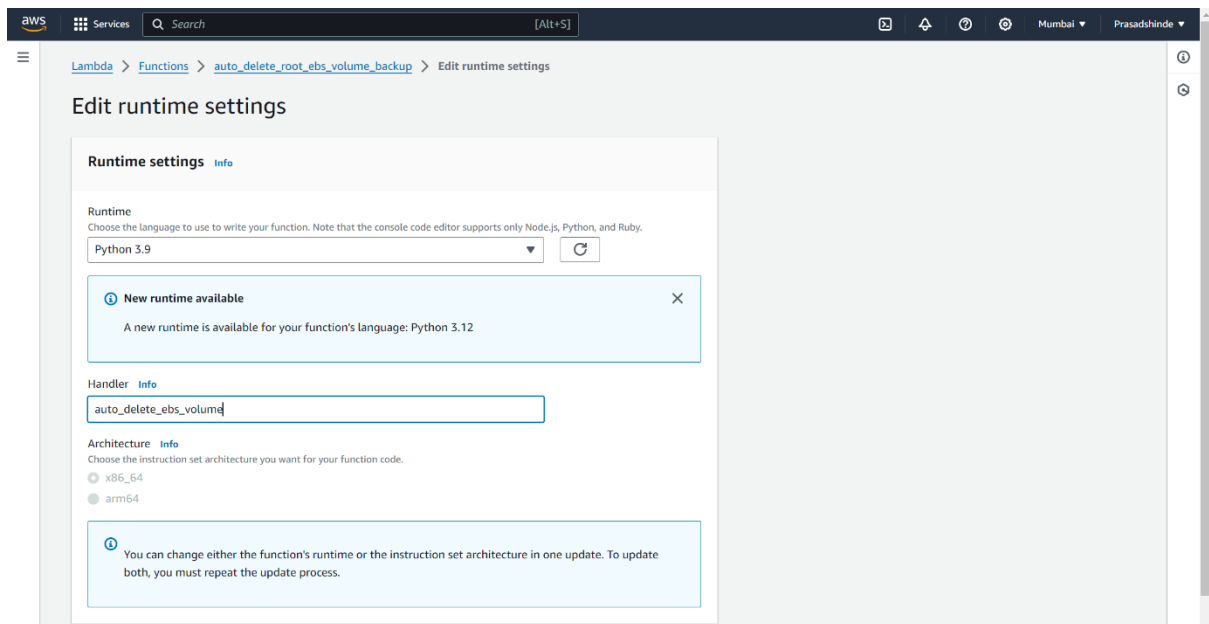

1. Create lambda function to delete the unused EBS volume across region (auto_delete_root_ebs volume _backup)

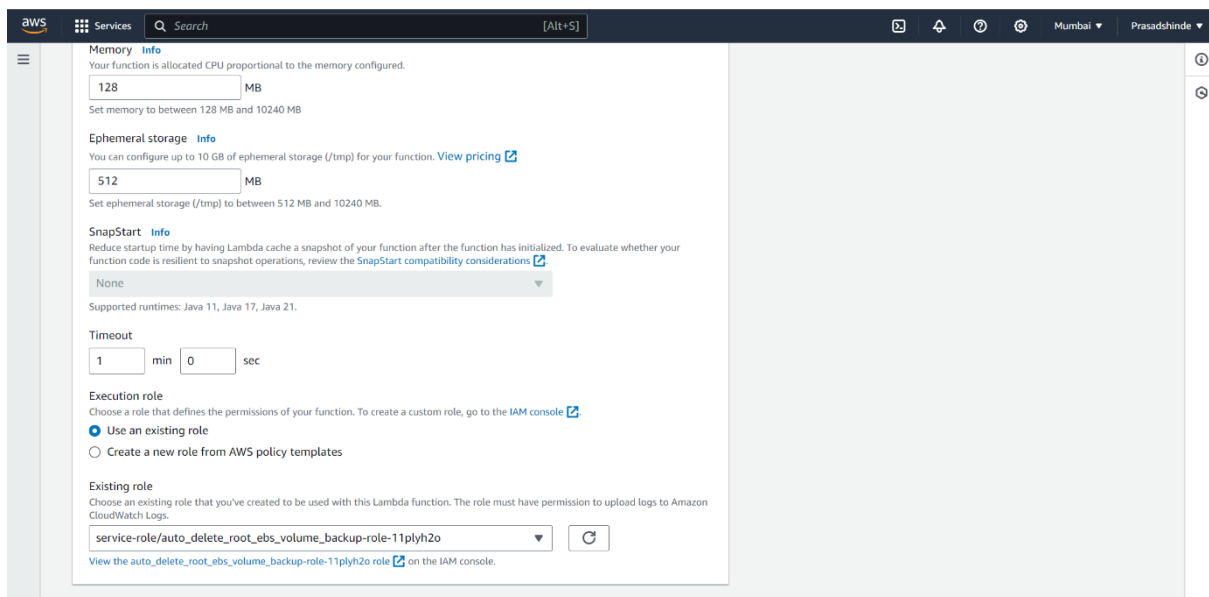

2. create delete_unused_ebs_volume_across_region in python file .

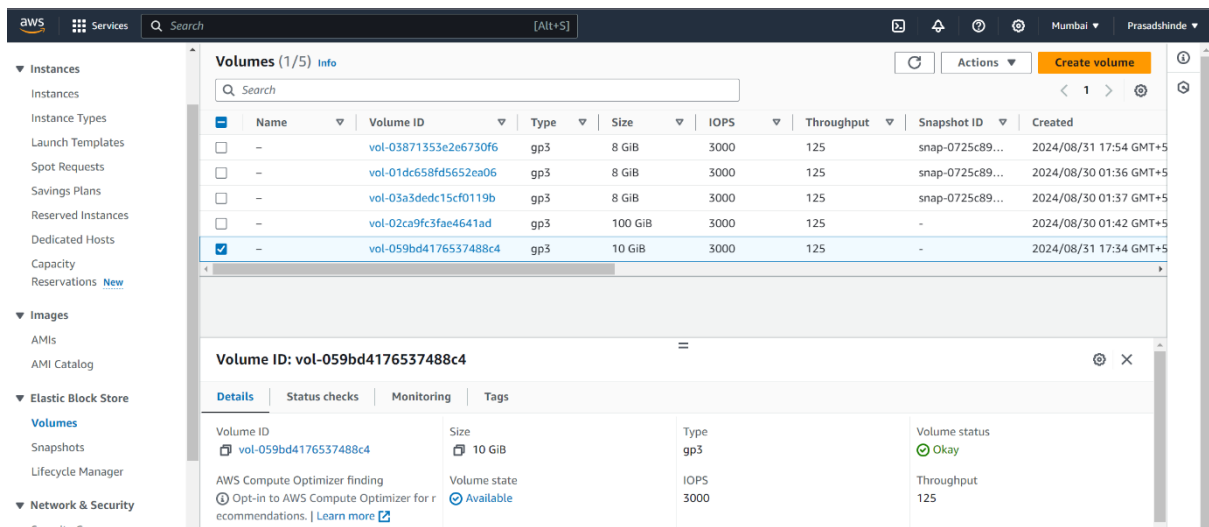

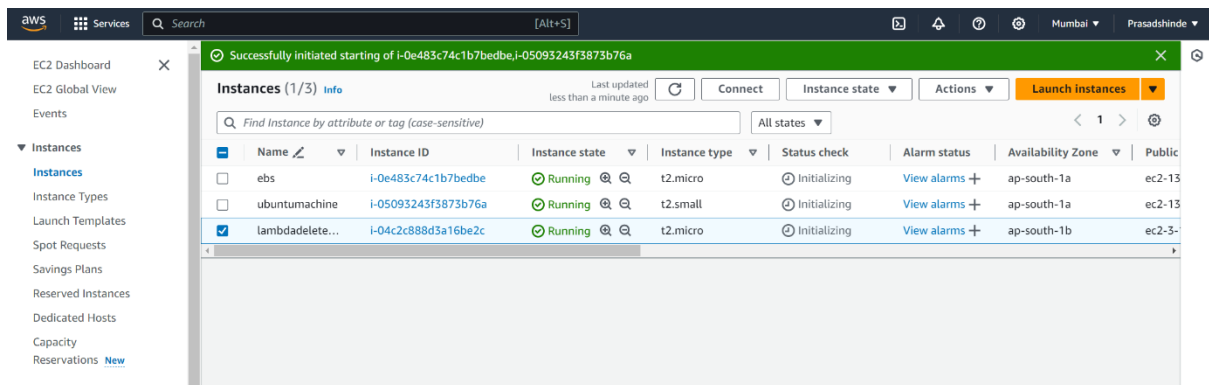

3.update the handler

4.change the timeout value from 3 sec to 1 min in configuration setting

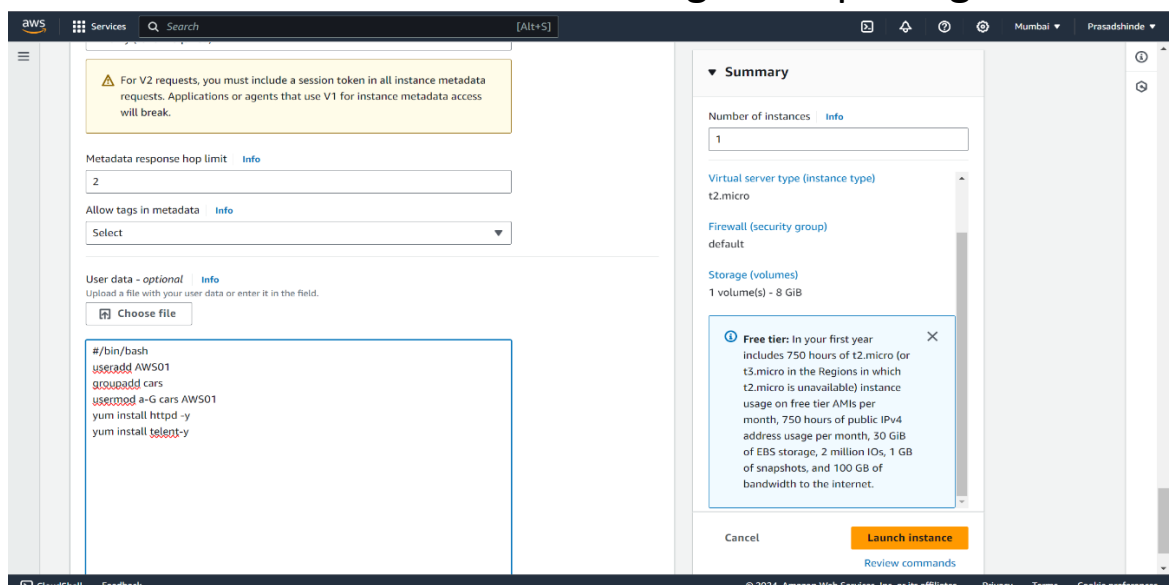

5.create a EC2 instance to check the volume is created or not

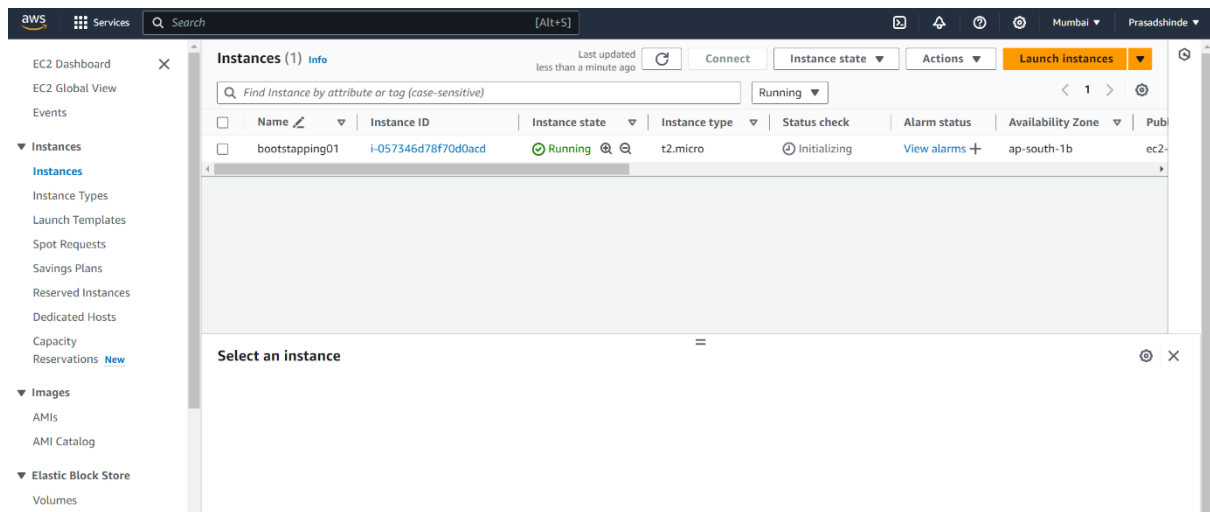

Bootstrapping

1. Create a EC2 instance with installing some package

2. Instance is created successfully

3. Connect the bootstrapping via putty
